

## Equipment Authorization – Grantee Code

Products subject to certification are required to be uniquely identified by an identifier known as FCC ID. The FCC ID consist of two parts:

- (1) grantee code
- (2) product code

### **Grantee Code**

The grantee code, specified in Section 2.926, is a three or five character alphanumeric string representing the Grantee / Applicant for certified products.

- \* Grantee Codes that begin with an alpha character (A-Z) consist of three characters.
- \* Grantee Codes that begin with a number (2-9) consist of five characters.
- \* The grantee code does not contain the numbers “one” and/or “zero”. The grantee code is assigned by the Commission permanently to a company for use in the identification of radio frequency equipment authorized under the certification procedure.

### **Product Code**

The product codes are uniquely established by the Grantee to identify each product approved by a Telecommunication Certification Body (TCB). The product code can be up to 14 alpha numeric characters. Hyphens (-) separated by an alpha numeric character are permitted; consecutive hyphens (-) are not permitted.

For information on how to obtain a grantee code, manage grantee code information (company name, address and contact information), recover a lost grantee code’s registration number, see KDB Publication 204515.
